

# Central and Northern California Coastal Marine Habitats: Oil Residence and Biological Sensitivity Indices

## RELATIVE ABUNDANCE OF MAJOR MACROBIOTA\*

Taxa	A	B	C	D	E	F	G	H	I	J
<b>ROCKY INTERTIDAL MACROBIOTA</b>										
Acorn barnacles	0	0	0	0	0	0	0		0	
Chlorophyta	0-C	0-C	0-C	0-C	0-C	0-C	0-C		0-C	
Porphyra spp.	0-C	0-C	0-C	0-C	0-C	0-C	0-C		0-C	
<i>Pelvetiopsis limitata</i>	C	C	C	C	C	C	C		C	
<i>Endocladia muricata</i>	C	C	C	C	C	C	C		C	
<i>Pelvetia fastigiata</i>										
<i>Fucus distichus</i>	0-C	0-C	0-C	0-C	0-C	0-C	0-C		0-C	
<i>Gigartina</i> spp.	C	C	C	C	C	C	C		C	
<i>Pollicipes polymerus</i>	C	C	C	C	C	C	C		0	
<i>Mytilus californianus</i>	C	C	C	C	C	C	C		0	
<i>Corallina</i> spp./ <i>Gigartina</i> spp.	0-C	0-C	0-C	0-C	0-C	0-C	0-C		0-C	
<i>Postelsia palmaeformis</i>	C	C	C	C	C	C	C		C	
<i>Halosaccion glandiforme</i>	C	C	C	C	C	C	C		C	
<i>Iridaea</i> spp.	C	C	C	C	C	C	C		C	
<i>Odonthalia</i> spp./ <i>Rhodomela larix</i>	0-C	0-C	0-C	0-C	0-C	0-C	0-C		0-C	
Coralline algae	C	C	C	C	C	C	C		C	
<i>Phyllospadix</i> spp.	C	C	C	C	C	C	C		C	
<i>Alaria marginata</i>	C	C	C	C	C	C	C		C	
<i>Egregia menziesii</i>	0	0	0	0	0	0	0		0	
<i>Laminaria</i> spp.	C	C	C	C	C	C	C		C	
<i>Lessoniopsis littoralis</i>	C	C	C	C	C	C	C		C	
<b>OTHER MACROBIOTA</b>										
<b>Kelp beds:</b>										
<i>Macrocystis</i> spp.	0	0	0	0	0	0	0			
<i>Nereocystis luetkeana</i>	0-C	0-C	0-C	0-C	0-C	0-C	0-C		0-C	
<b>Marine mammals:</b>										
Elephant seal										
Harbor seal						0-C				0
Steller sea lion			0-C							
California sea lion										
<b>Seabird nesting colonies:</b>										
Fork-tailed storm petrel										
Leach's storm petrel										
Ashy storm petrel										
Brandt's cormorant			0-A							
Double-crested cormorant										
Pelagic cormorant	A		A		0	0	0			
Black oystercatcher			0							
Western gull			0-C		0	0	0			
Common murre										
Pigeon guillemot	C		0		0		0			
Cassin's auklet										
Rhinoceros auklet										
Tufted puffin										
<b>Threatened/Endangered Species:</b>										
Aleutian Canada goose										
Southern sea otter										

\*Relative abundance for summer conditions: 0 = occasional, C = common, A = abundant

## PHYSICAL SHORE-ZONE CHARACTERISTICS

## ABBREVIATED PHYSICAL SHORE-ZONE CODING EXPLANATION

This is an abbreviated legend for the physical shore-zone coding sheets; consult the main text for a complete discussion of codes and rationale. Only the across-shore descriptors for morphology and texture are discussed.

ACROSS-SHORE COMPONENTS - dominant morphologic and textural character of each across-shore component, described in a landward to seaward sequence. Each component consists of a geomorphic form descriptor and a substrate descriptor:  
FORM - Bb, Csg, - TEXTURE

The primary geomorphic forms are initially described by a series of 12 codes:

A Anthropogenic	E Coastal Bay, Lagoon, Estuary	P Platform
B Beach	I Inlet	R River
C Cliff	M Marsh	S Bar/Trough
D Dune	O Offshore Rocks	T Delta

Each of these groups is then further modified by codes as indicated below.

**Anthropogenic (A)**  
e causeway j jetty m marina t trench  
f float g groin r boat ramp s seawall w wharf

**Beach (B)**  
b berm i inclined slope s storm ridge  
c washover channel m multiple intertidal bars t low-tide terrace  
f beach face r single intertidal bar w washover

**Cliff (C)**  
a active or erosional p passive c caves present

**Dune (D)**  
b blowout f foredune s ridge and swale  
d stabilized r random form l longitudinal

**Coastal Bay, Lagoon, Estuary (E)**  
b enclosed bay c estuary

**Inlet (I)**  
e ephemeral a opening fixed by offshore structures  
s stable f flood-tidal delta l ebb-tidal delta

**Marsh (M)**  
c tidal creek

**Offshore Rocks (O)**  
e intertidal reef s sea stack  
r rock outcrop (>2 m above M.S.L. and <10 m in width or length)

**Platform (P)**  
h high-tide platform f horizontal t terraced  
l low-tide platform r ramp i irregular

**River (R)**  
b braided m multiple s single channel

**Bar/Trough (S)** subtidal r with rip channels

**Delta (T)**  
c channel m multiple channels p delta plain  
f fan s single channel v crevasse  
l levee

Substrate type or sediment texture are described in detail by a series of codes. The sediments or materials of the shore are initially coded into one of four groups:  
A anthropogenic materials C clastic sediments  
B biogenic sediments R bedrock

Each of these groups is then further modified by texture or composition as indicated below.

**Anthropogenic materials (A)**  
a metal n concrete (solid) w bark or wood debris  
d debris, rubble t logs  
e concrete (individually formed) u wood (structural; e.g., pilings or boards)

**Biogenic sediments (B)**  
l trees or wood particles o organic litter  
s shell hash (with a texture as described below)

**Clastic sediments (C)**  
b boulder s sand m mud  
c cobble # silt g gravel  
p pebble # clay r rubble

**Bedrock (R)**  
i igneous m metamorphic s sedimentary

Where more than one texture is present in an across-shore component, several substrates or textures may be indicated. Where one texture physically overlies another, it is indicated by a slash (e.g., Cc/Rs, and over rock). Where several mutually exclusive textures occur within a component, such as rock outcrops within a sand beach, a colon is used to indicate that association (e.g., Cc:R).
